
LOOP Token

Fact Sheet

Prepared for liquidity providers and bridge partners

20 July 2026

Contract Details

Token name	Loop Utility Token
Symbol	LOOP
Standard	ERC-20
Decimals	18
Chain	Base L2 (Coinbase), Chain ID 8453
Contract address	0xb8B309BBD007143cbef1844b75C1Fd038a267F21
Owner address	0xDB113f65d3368e5C0379486755fc3Fc0b7fB97cE
Basescan	basescan.org/token/0xb8B309BBD007143cbef1844b75C1Fd038a267F21
Compiler	Solidity v0.8.24, Optimization enabled (200 runs)
EVM version	Paris
Contract name	LoopToken
Built on	OpenZeppelin (Ownable, ERC20, Pausable)
Source verified	Yes, on Basescan (Standard Json-Input format)
Bytecode	5,785 bytes (direct deployment, not a proxy)
Audit	Built on audited OpenZeppelin contracts. Standalone audit pending.

Supply Model

Initial target supply	1,000,000,000 (1B) LOOP
Current total supply	0 (mint-on-purchase model)
Supply type	Inflationary, mint-on-demand
Hard cap	None

Tokens are minted when purchased. There is no pre-minted supply. Additional supply growth comes from two sources:

- 1. Business enrolment:** businesses joining the Loop governance platform trigger new token minting, adding both tokens and liquidity to the ecosystem.
- 2. Fund structure:** assets held within the Loop fund structure back further token issuance, creating an asset-linked expansion model rather than uncapped inflation.

Pricing

Method	Price
On-chain (ETH)	0.0004 ETH per token
Card (USD)	\$1.00 per token
Card (GBP)	£0.80 per token
Card (EUR)	€0.90 per token

Tokenomics

For every token purchased, the contract mints a total of 2x tokens:

Allocation	Amount	Purpose
Buyer	1.0x	Sent to the purchaser's wallet
Impact Treasury	0.5x	Funds community governance projects
Allocation Pot	0.5x	Distributed as governance participation rewards
Total minted	2.0x	

Example: a purchase of 100 LOOP results in 200 LOOP being minted: 100 to the buyer, 50 to the Impact Treasury, and 50 to the Allocation Pot.

Contract Functions

Public

purchase(uint256 amount) payable: buy tokens with ETH. Requires amount x pricePerToken as msg.value.

pricePerToken() view: returns the current price per token in wei (4000000000000000 = 0.0004 ETH).

Owner only

mint(address to, uint256 amount): mint tokens to a specified address (used for card purchase fulfilment from Ledger wallet).

pause() / unpause(): emergency pause mechanism.

transferOwnership(address): transfer contract ownership.

Events

AllocationDirected(address from, bytes32 communityId, uint256 amount): emitted when tokens are directed to a community.

CommunityWalletSet(bytes32 communityId, address wallet): emitted when a community wallet is configured.

Platform

Platform	Loop_cmbntr
Website	gov.loopcmbntr.live
Console	console.loopcmbntr.live
Entity	Loop TGP
Purpose	Utility token for global governance platform
Use cases	Voting weight, delegation, community participation, earnings distribution
Classification	Utility token. Not a security.

Liquidity Requirements

We are seeking a liquidity bridge partner to provide trading liquidity for LOOP on Base L2.

Preferred pairs: LOOP/ETH, LOOP/USDC

Contact: samuel@loopinc.live

This document is provided for informational purposes to prospective liquidity partners. LOOP is a utility token on the Loop_cmbntr governance platform deployed on Coinbase's Base L2 network.
